

Sata Diarra Participation 3

1. Use the steps above to write a file path from photo.png to contact.html

../lab02/contact.html

2. Use the steps above to write a file path from contact.html to logo.gif

../lab02/images2/logo.gif

3. Imagine there was an index.html file in the ist263 folder. Write the relative path from the bio.html file to the index.html file.

../index.html

Submit answers to the following:

- a. What questions did you have about the lab?

One question I have is how are we able to create hyperlinks to open other pages of another site I coded? In this lab we used links to open other sites we wanted to reference. However, how can we open links to another site I coded?

- b. What was the hardest part of the lab?

The most challenging part about the lab would be correcting my syntax mistakes. I usually struggle throughout the lab because my website faces silly errors from not closing headers and body functions.

- c. Rate your comfort level with this week's topics.
2 ==> I can do this on my own without any help.
